[Main differences between V1.3.1 and V2.0](#)

## Sommaire

- [1 PATRIUS and GENIUS upgrade](#)
- [2 Saving the Orbit data displayed](#)
- [3 TLE entry](#)
- [4 By default values](#)
- [5 Ground Station widget](#)

## PATRIUS and GENIUS upgrade

Now, **GENOPUS** is linked with a more recent **PATRIUS** version (V4.1.1). This update permits to get less "Custom" classes (see [here](#)) as these ones have been deployed directly in **PATRIUS**. **GENOPUS** uses also the last [GENIUS](#) version (V1.8)

## Saving the Orbit data displayed

It is now possible to save the way the orbit data have been displayed via the **GPOrbit** widget independently of the "Pivot" (i.e. the way the orbit data have been saved in memory).

## TLE entry

Always for the **GPOrbit** widget, it is now possible to enter directly **TLE** data. These data will be automatically converted in osculating parameters.

## By default values

In the [GPSunPointingAttitudeLaw](#) widget the by default axis are now **+I** and **+J** (rather than **+I** and **+J** in the previous version).

## Ground Station widget

A specific [GPGroundStation](#) widget for defining ground station data has been created. This widget is also used in the [GPVisibilityFromStationDetector](#) widget
